

Overview

Biological Immunity Analysis

The Biological Immunity Analysis is a comprehensive scientific system based on mathematical principles by which we can understand how biological life develops and functions. This model explains the multi-dimensional cause and effect of degenerative dis-ease—namely, the *depletion*, *distortion*, *disruption* and *destruction* of the ideal electro-chemical environment of the basic molecular components and subcomponents of the cells.

Multi-dimensional Integrative Healing

Additionally, and most importantly, this model is the most holistically comprehensive, and scientifically objective method by which we can gain an unparalleled understanding of the human condition and its potential for healing the physical, mental, emotional and spiritual being.

Lab Procedures

To achieve success in nutrition it is necessary to have the ability to measure the cause and effect of applied nutrition. Dr. Carey Reams developed a simple ingenious urine/saliva analysis method that measures the cause and effect of applied nutrition, and gives us the ability to see the process and detect potential health problems prior to symptoms appearing. Integrating Reams' principles with our proprietary software you will learn how to mathematically analyze an individual's body chemistry, making it possible to detect the location and severity of the energy loss/disease process.

BIA Integrative Software

Dr. Gary Martin integrated Reams' method into a comprehensive software system. This one of a kind, pre-diagnostic client record management system provides automated reports in an easy to read format. The BIA software evaluates immunological and metabolic functions, computes biological age, energy reserves, speed of decline, balance ratios, and the ability to identify and chart adverse relationships, pathological tendencies, personality traits, stress patterns and more. The BIA provides client specific profiles indicating which nutritional supplements, homeopathic remedies, raw juice therapy, or dietary and lifestyle recommendations are necessary to adjust and balance the body chemistry – all in various file formats and print options.

Topics of Interest

- ▶ You will learn how to integrate the valuable BIA software and I AM knowledge into your practice. This is an extensive presentation of the basic principles, physical evaluation techniques and treatment protocols of the program
- ▶ Explore a new approach to better digestion, assimilation and utilization of nutrients based on 30+ years of urine/saliva research
- ▶ Explore the relationship between nutritional deficiencies and imbalances in body chemistry
- ▶ Use new techniques to identify digestive and nutritional deficiencies
- ▶ Learn how to determine whether a patient's dietary habits are the cause of specific health problems
- ▶ Become familiar with the basic techniques to pinpoint patient's dietary excesses or deficiencies
- ▶ Discover how to pinpoint the emotional causes behind physical symptoms
- ▶ Learn how to analyze the urine/saliva test known as the BIA
- ▶ Using the Urine Refractive Index determine what it tells you about your health
- ▶ Learn what Urine pH and Saliva pH tell you about your health
- ▶ Learn what urine Conductivity is and what it tells you about your health
- ▶ Learn what Nitrate Nitrogens are and what they tell you about your health
- ▶ Learn what Ammonical Nitrogens are and what they tell you about your health
- ▶ Understand the relationships between the actual and balanced BIA numbers
- ▶ Understand what the Metabolic Efficiency is and how it affects your health
- ▶ Understand what the Immune Energy is and its significance to your health
- ▶ Learn what the Biological Age is and its significance as a progressive marker
- ▶ Learn to identify Adverse Relationships and how can they be used to indicate whether the body chemistry profile is physical or emotional in origin
- ▶ Learn what the Speed of Decline is and how it is calculated
- ▶ Understand what various nutritional regimes may be used to positively alter body chemistry
- ▶ Determine what nutritional products are appropriate for various body chemistries
